About Floating Wind Solutions

Leveraging the Established Global Offshore Supply Chain

Floating Wind Solutions will showcase the many capabilities of the established Global Offshore Supply Chain and create a strategic platform for technical solutions and knowledge sharing while facilitating development of this novel industry. Our goal is to create a strategically significant forum bringing together key industry players to share technologies, opportunities, lessons learned and challenges in order to influence the market towards delivering competitive, commercially scaled Floating wind developments on an accelerated basis. Our concept brings together supply and demand under one roof to discuss technical solutions for two days and offer two evenings of networking opportunities. New strategies, innovative solutions, applied technologies and more efficient ways of working will be essential ingredients to the industry's future success.

We are pleased to announce our Advisory Board of distinguished experts in all fields involved in Floating wind and related Supply Chains. Our confirmed members include Lars Samuelsson **ABS**, Tom Fulton **Acteon Group**, Knut Vassbotn **Aker Offshore Wind**, Alla Weinstein **Castle Wind**, Henrik Baltscheffsky **Hexicon**, Bruno Geschier **Ideol**, Yvan Leni **Maersk Supply Services**, William Cooper **Black Arch**, Thomas Agnevall **Strana Offshore**, Steve Rampton **Vesper Marine**, Chris Barton **Wood**, and Von Thompson **Xodus Group**. *More announcements coming soon.*

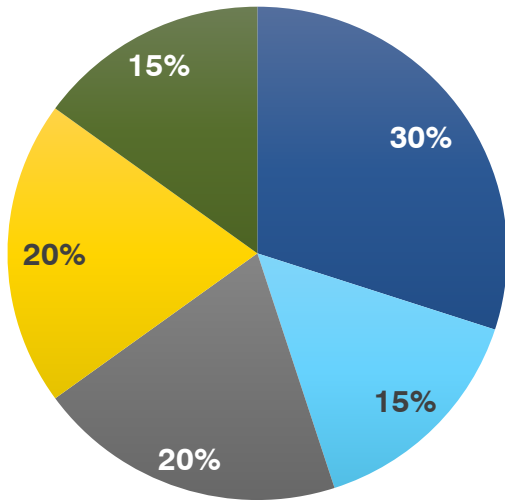

The timing could not be better for **Floating Wind Solutions 2021**. Floating wind is a sizeable global opportunity ramping-up for commercialization across six to ten distinct markets; one in which cost reductions of the 'system' are currently a major focus and high priority. Over a short period of time, a series of material market developments have elevated floating wind to new heights including: Equinor's rapid advancement into commercial scale offshore wind projects and their goal of becoming a global major within offshore wind with equity ambitions of 12 to 16 GW by 2035; Royal Dutch Shell who aims to make power a significant part of their business with an emphasis that offshore wind is mission critical with a current opportunity pipeline of 5 GW and expanding; Shell's increased investment in several floater designs followed by their recent acquisition of EOLFI; and TOTAL Quadran's recent commitment to pursue floating wind as part of their Renewables' strategy.

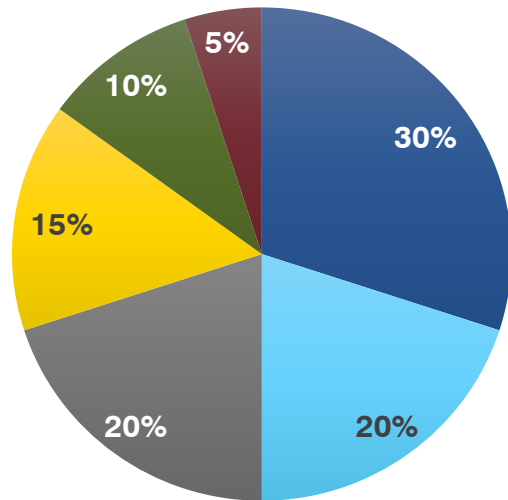

Projected Attendee Demographics

Job Function

- Management (CEO, MD, Pres)
- Sales & Marketing
- Business Development
- Engineering / Technical
- Project Mgmt.

Company Type

- Developer / Power & Electricity Owner
- EPC Contractor
- OEM / Service Supply
- Engineering / Construction
- Financial
- Government/Academia
